

Tred-MOR[®]

CARPET CUSHION

PERFORMANCE WHERE IT COUNTS

Every aspect of your design should be flawless. When you specify Tred-MOR rubber carpet cushion, it will be – for years to come.

Only the original Tred-MOR Dubl-STIK system has been proven to perform. Scientific studies confirm carpet appearance can be preserved and useful life extended when protected by a properly engineered premium-density rubber carpet cushion. Since 1961, engineers at SCI have been refining and improving performance qualities of cushion to prevent premature carpet failure. Independent tests show Tred-MOR carpet cushion dramatically reduces carpet wear.

Tred-MOR cushion and the Dubl-STIK system installation procedures were developed by SCI, a Leggett & Platt company. SCI manufactures Tred-MOR rubber cushion in 22 – 33 lb. density (flat profile) to provide maximum carpet protection and to extend carpet's useful life. Dubl-STIK installation unifies carpet, cushion, and floor to preserve carpet appearance. Tred-MOR cushion, when installed following the Dubl-STIK system, has been shown to reduce carpet pile compaction by up to 62% when compared to direct glue. Improved appearance retention extends the useful life of the carpet and reduces replacement costs. The cost associated with the Tred-MOR Dubl-STIK system self-liquidates while the savings generated by the system add significantly to reducing carpet replacement budgets. Over 100 million square yards have been installed using the Tred-MOR Dubl-STIK system since 1985.

Preserves appearance, extends carpet life, and reduces cost.

CARPET TESTED – 28 oz. commercial loop pile
CUSHION TESTED – Tred-MOR 2580 .25"

Compare the difference.

In a comparison test of carpet protected by Tred-MOR carpet cushion vs. carpet without cushion, the Tred-MOR was still performing at 100,000 cycles. The carpet without cushion was crushed at 23,000 cycles. That's over four times more life with added comfort and no carpet ugly-out. (10,000 cycles equal one year normal wear.)

Sub-floor

The Tred-MOR Dubl-STIK system of installation allows quick and easy fabrication of borders, inserts, and logos. Uneven borders, common to "stretch-in" methods, are eliminated with the Tred-MOR Dubl-STIK system.
